

Fuel Management System(I)

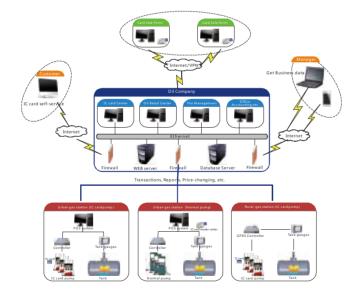

What is Fuel Management System

In order to meet the demand of customer management and chain management of product oil retail industry, we have developed the complete system solution-fuel management system for oil companies.

The system solution is a comprehensive platform integrating retailing and customer information management. It consists of IC Card Gas Station Management System YS9511, IC Card Center Management System YS8591, IC Card Sale point System YS8592, Loyalty card center management

system YS8595, Loyalty card service point system YS8596, IC Card online Self-service System YS8597, and Retail Center Management System YS8800.

Material flow, capital flow, information flow and work flow form the main line and are organically combined in this system to actually realize a service management system based on Wide Area Network and Local Area Network. The system transforms large quantities of data into useful decision-making information with data warehouse technology and serves the decision-making process.

Diagram

- The system can connect with many brands IC card dispensers and tank gauges.
- Without computer, the dispenser can store 2000 refueling deals. So, even though the computer's connection is failure, dispensers will work normally.
- The system can manage 100,000 gas stations in a network .
- The system can manage 100,000 deposit points in a network.
- The system can manage 100 million cards.
- You can use the system without geographical restrictions.
